

## Capsulotomy

Sharp tip cystotome for creating an opening into the anterior capsule, nucleus dislocating or other intraocular applications. Each cystotome is packaged to ensure product quality and provide aseptic transfer.

## Hydrodissection

For separating the nucleus from the capsule and cortical attachments.  
Also for separating and softening layers of nucleus prior to phacoemulsification.

## Hydrodissection

For separating the nucleus from the capsule and cortical attachments.  
Also for separating and softening layers of nucleus prior to phacoemulsification.

### Flat End

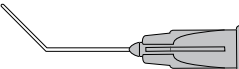

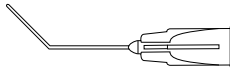

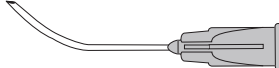

Flattened for easy placement under anterior capsule and provides a fan-like distribution of fluid for more effective dissection.
